Lion Cubs Grow Up

Copy Cats

Lions live in family groups called prides. Prides work as a team to hunt, share food, and protect each other. Lion cubs watch the adults in their pride to learn how to “lion.” Then the cubs copy the grown-ups.

STALK!

Adult lions follow, or stalk, their prey. Cubs stalk each other, or sometimes a butterfly, to practice hunting.

Cubs pounce too, just like grown-up lions.

Adults roar so loud, the sound can be heard from far away. Cubs practice their big cat roar, too.

ROAR!

POUNCE!

These cubs will someday become bigger cats. But for now, it is important to enjoy being a little cat!

This kind of
lemur is called
a **SIFAKA**.
Say my name:
sih-FAH-kuh

Leaping Lemur

See how this lemur jumps from tree to tree.

1

A lemur wants to move to a different tree. It pushes off a branch and soars through the air.

2

The lemur reaches out toward another tree with its long arms.

3

It grabs a tree branch. The lemur makes a safe landing in this new tree.

Why do you think trees have roots?

Roots grow into the ground to hold a tree in place. When strong winds blow, the tree does not fall over. Roots also soak up water from the soil.

Carefully tear along this edge to pull these pages out. Share your work with others!

Your Turn!

Draw, trace, and play: These pages have fun activities all about the ocean.

Ask a grown-up to show you where the oceans are on this map. Then color them in!

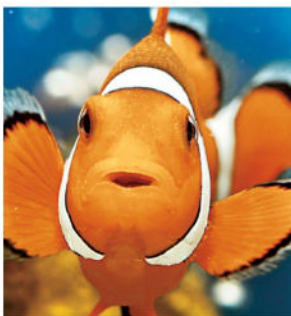

This magazine belongs to:

Write your name in the space above.

What Are These?

__OLPHIN

__LOWNFISH

__EAHORSE

__RAB

__CTOPUS

__TINGRAY

__ELLYFISH

__EA TURTLE

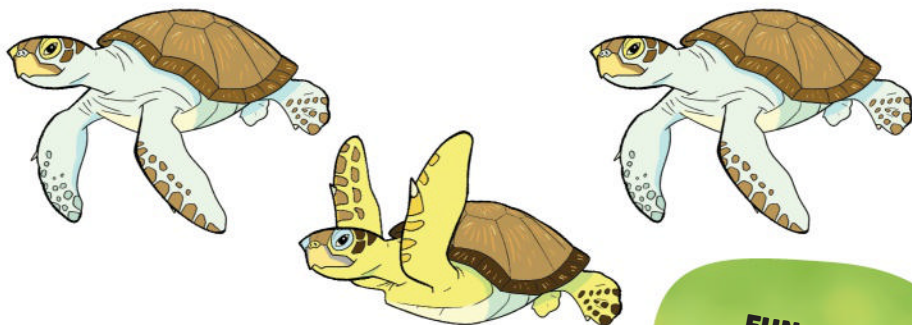

__EA STAR

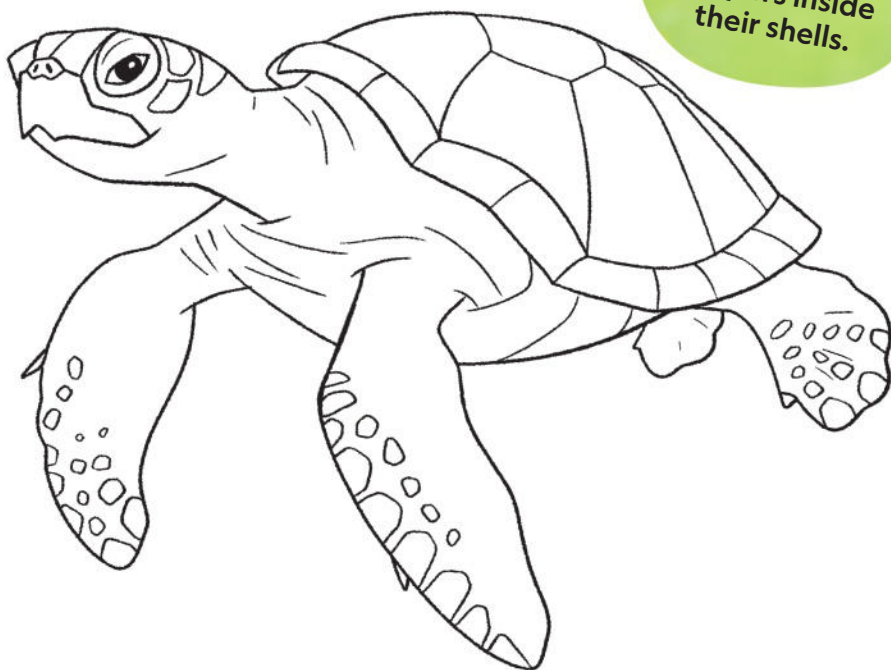

Which of these creatures would you like to meet?

Swimming Sea Turtles

Which of the three small sea turtles below is different? Circle it. Then color in the big sea turtle.

FUN FACT!
Sea turtles can't
pull their heads or
flippers inside
their shells.

Where Do We Live?

Some animals live in the ocean. Other animals live on land. Circle the animals that call the ocean home. Draw a square around the animals that hang out on land.

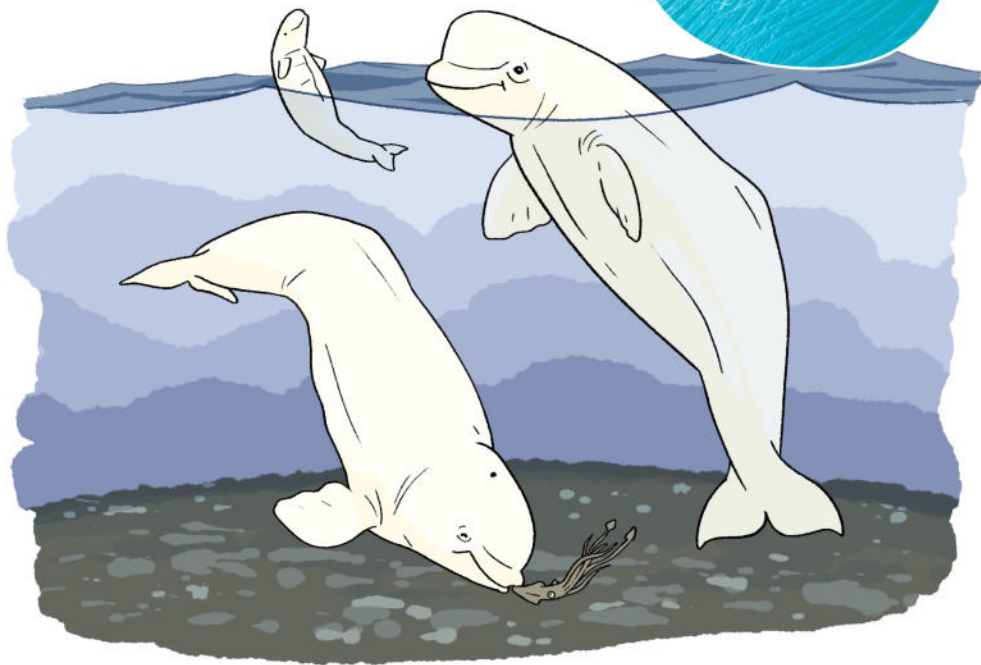

FUN FACT!
Some animals that live in the ocean breathe water. Other ocean animals breathe air.

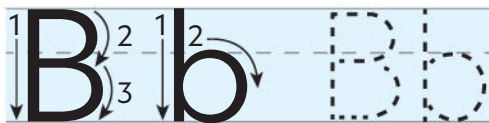

B is for Beluga

Belugas are small, white whales. Count how many belugas there are below.

FUN FACT!
Belugas swim along the ocean floor looking for food like squid.

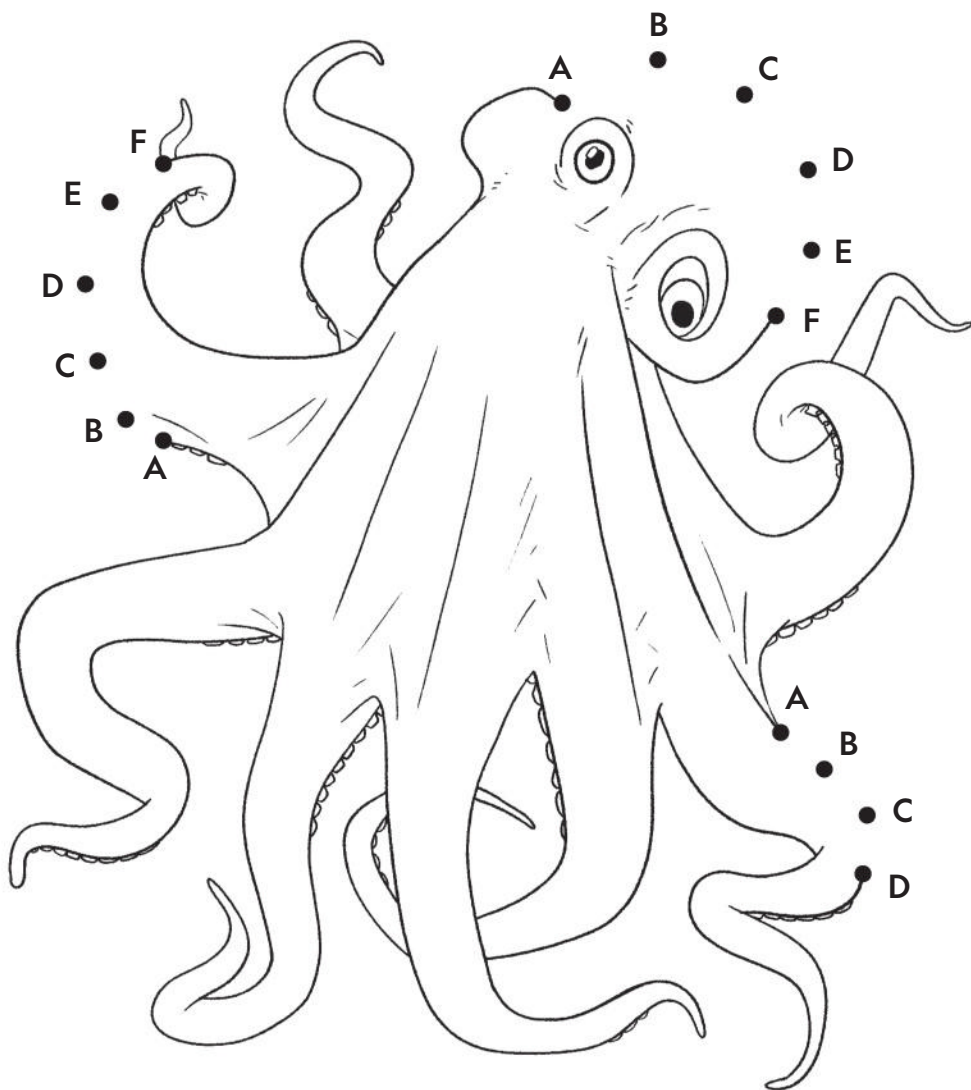

Next, trace the capital "B" and the lowercase "b" below. Practice writing your own letters in the empty space.

What's That?

A mystery animal is swimming in the ocean. Connect the dots to find out what it is. Then color it in.

Hint:
This creature has
eight arms!

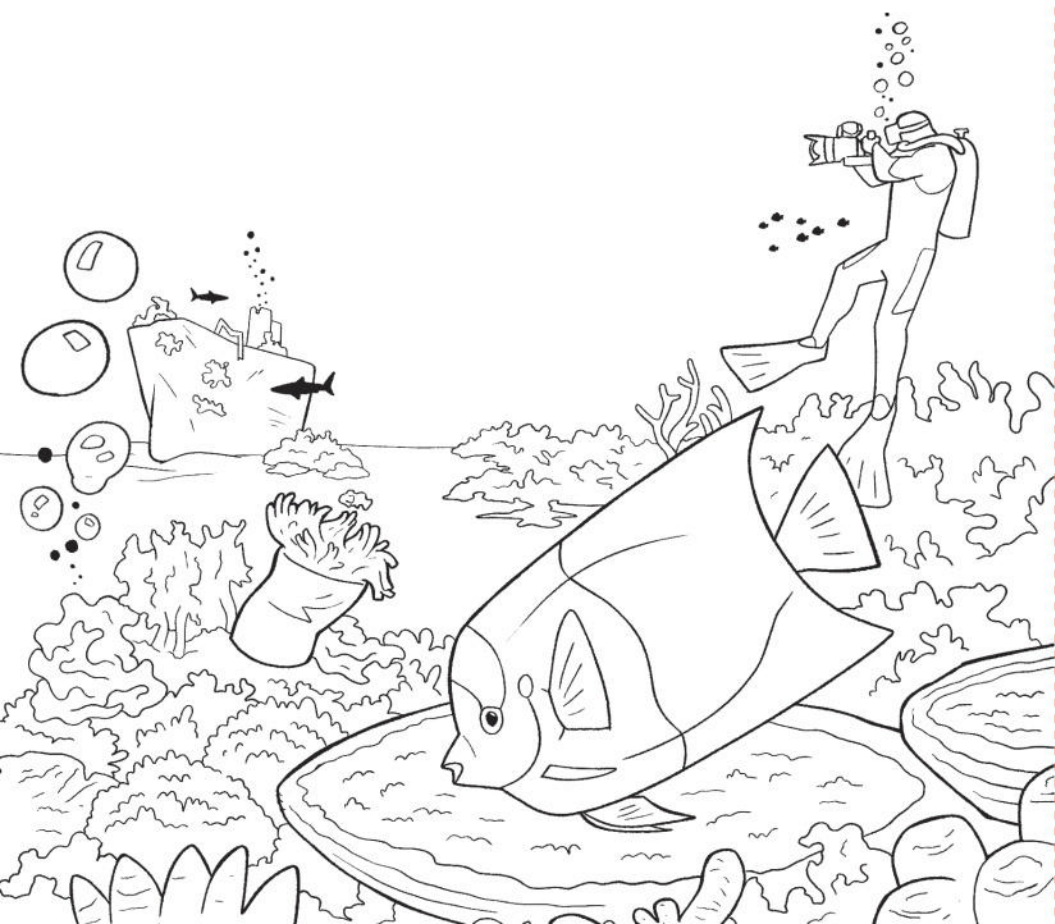

See Seashells

When waves crash on the shore, they leave seashells behind. How many seashells can you count on this page?

Ocean Explorer

Imagine you are this scuba diver underwater!
What would you like to see? Draw it in the
empty space below.

That's Cool!

Meet the banana slug.

Banana slugs eat dead plants and animals from the forest floor.

The slug has two antennae on top of its head that help it find food and feel its way through the forest.

ANTENNAE
(say an-TEN-ee)

The slug's name comes from its color. A banana slug can be longer than a real banana!

Playing With

h Pumpkins

Some animals live in zoos. Zookeepers keep these animals healthy and curious with fun toys, new foods, and changes to their living spaces.

In the fall, zoo animals get a special treat to play with: pumpkins!

FUN FACT!

A pumpkin with a face carved into it is called a jack-o'-lantern.

ROCKHOPPER PENGUINS

TIGER

CHRIS AUBREY/ALAMY (PENGUINS); KLAUS-DIETMAR GABBERT/PICTURE ALLIANCE/GETTY IMAGES (TIGER); YU MOK/PA IMAGES, ALCANTY (MONKEY); TRABOTA, SHUTTERSTOCK (ORANGE TEXTURE)

FUN FACT!

Pumpkins are made mostly of water.

**SQUIRREL
MONKEY**

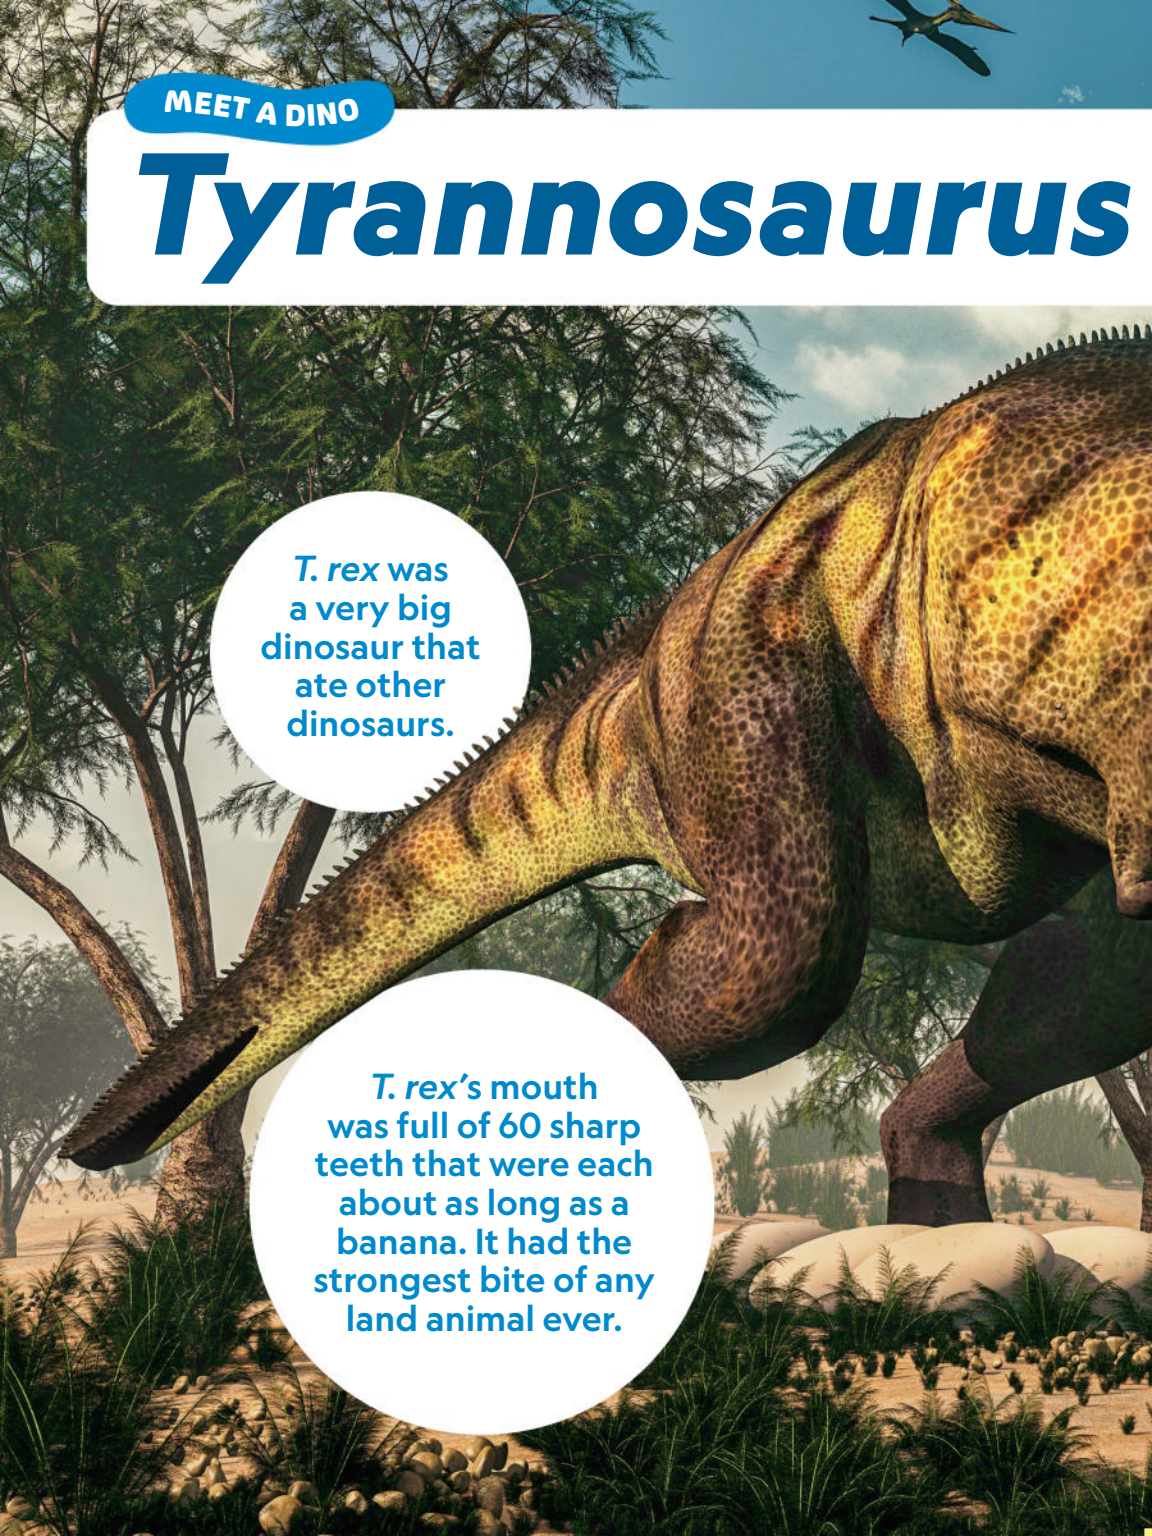

FUN FACT!

Pumpkins can also be red, green, yellow, blue, tan, or white.

GROWN-UPS:

Visit zoos approved by the Association of Zoos and Aquariums. These institutions help save species.

MEET A DINO

Tyrannosaurus

T. rex was a very big dinosaur that ate other dinosaurs.

T. rex's mouth was full of 60 sharp teeth that were each about as long as a banana. It had the strongest bite of any land animal ever.

A large, detailed T-Rex dinosaur is the central focus, shown from the chest up and angled towards the right. Its skin is a mix of dark brown and golden-yellow with a scaly texture. The dinosaur's mouth is open, revealing sharp, yellowish teeth. The background is a lush prehistoric landscape with green trees and a blue sky with white clouds.

Rex

SAY MY NAME:
ty-RAN-oh-SOR-us

FUN FACT!
This dinosaur lived a very long time ago. If T. rex were alive today, its bite could dent a car.

Moment of Wow!

This year, this spacecraft in Florida took crew members around the moon and back.
